

Termites

Termites can be a property owner's nightmare. We all know someone who has had termites or currently has termites on their property.

Termites are widespread throughout Queensland and can be found in trees/stumps retaining wall, fences and gardens. Termites become a real issue for property owners when they decide to move to another feeding source and attack "YOUR HOME"

Some species are extremely aggressive and can cause Tens of Thousands of dollars damage to a property within a very short period of time if left undetected.

However you can reduce the risk of implementing a Termite management program, and having regular Pest inspections carried out by a licensed Timber Pest Inspector. This will not prevent termites but early detection will reduce the extent of damage they may cause.

Any recommendations within a Pest inspection report should be carried out as a matter of urgency.
